

Webb vs. Allen Stem cells

Jim Webb is a strong supporter of ethical stem cell research. This research has the potential to cure diseases like Alzheimer's, Parkinson's, and cancer. Leaders from all parts of the political spectrum support this life saving research. This year, the Senate passed a bill that would have expanded stem cell research, which President Bush vetoed. George Allen supported President Bush's veto and continues to align himself with the conservative fringe of the Republican Party in an attempt to win the Republican nomination for President in 2008.

Jim Webb supports ethical stem cell research. Jim knows the potential such research has for curing diseases that affect thousands of Virginians.

Jim Webb supports the Stem Cell Research Enhancement Act. The act would expand access to embryos scheduled to be destroyed, providing crucial new resources in the fight against genetic disease.

Webb on the Stem Cell Research Enhancement Act. "Responsible stem cell research holds too much potential for too many people to be obstructed by politicians. The President should immediately sign this legislation into law and give new hope to the victims of disease and their families."

George Allen opposes stem cell research.

Allen voted against The Stem Cell Research Enhancement Act, a bill that would have given researchers valuable new tools in their stem cell research.

George Allen wants embryos destroyed, instead of using them for stem cell research.

Allen voted against the Stem Cell Research Enhancement Act. The Act made embryos scheduled to be destroyed, available to researchers.

Allen on the Stem Cell Research Enhancement Act. "It's not appropriate for the federal taxpayers to pay for the sort of stem cell research that would destroy human embryos."
